

VERTO INTELLIGENCE

The future of Public Sector delivery

CEO Foreword

Artificial intelligence is already beginning to reshape how organisations deliver change, make decisions, and manage complexity. In my view, this is not a temporary trend or a future consideration. It is the next natural evolution of delivery itself.

The organisations that will thrive over the coming years are those that successfully embed AI into everyday workflows in a way that genuinely supports people, improves visibility, and removes unnecessary friction from delivery. As expectations increase and resources become more constrained, leaders need

better insight, faster access to information, and greater confidence in decision-making than ever before.

At the same time, a new generation of project and programme professionals is entering the workplace with very different expectations. Manual reporting, disconnected spreadsheets, and repetitive administrative work are increasingly seen as barriers rather than accepted parts of delivery. People want to spend more time solving problems, collaborating, and delivering meaningful outcomes, not chasing updates or compiling reports.

“...our focus remains the same: creating technology that makes delivery simpler, smarter, and more effective while protecting the integrity and security of our clients’ data above all else.”

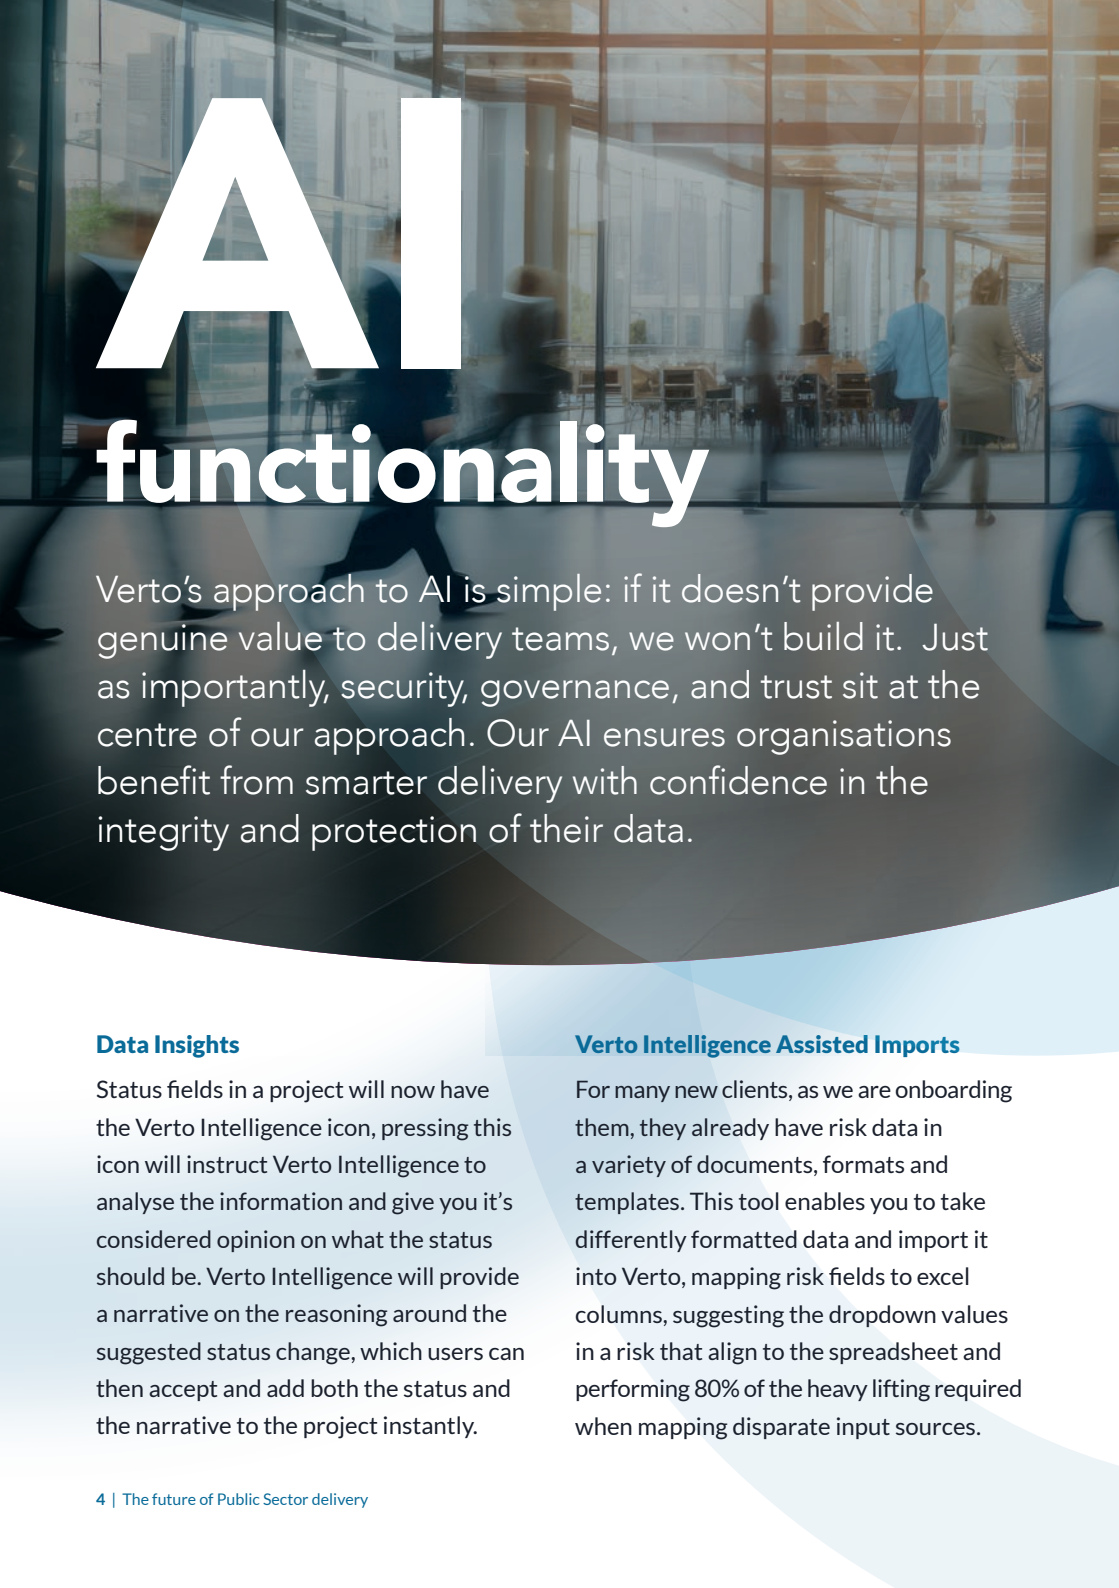

Simon Sharp, Verto CEO

Used responsibly, AI has enormous potential to support this shift. But it must be approached carefully. Security, transparency, governance, and trust cannot be afterthoughts, particularly within complex and highly regulated environments.

That philosophy has shaped our approach at Verto. We have never viewed AI as something to add for attention or novelty. Every capability we introduce is carefully considered, grounded in real delivery challenges, and designed to provide practical value to our clients.

Whether reducing reporting burden, improving visibility across portfolios, or helping teams surface insight more quickly, our focus remains the same: creating technology that makes delivery simpler, smarter, and more effective while protecting the integrity and security of our clients’ data above all else.

The future of delivery will undoubtedly involve AI. The real opportunity lies in implementing it thoughtfully, responsibly, and in ways that genuinely help people do their best work.

A blurred background image of a modern office interior with large glass windows and people walking, creating a sense of motion and activity.

AI functionality

Verto's approach to AI is simple: if it doesn't provide genuine value to delivery teams, we won't build it. Just as importantly, security, governance, and trust sit at the centre of our approach. Our AI ensures organisations benefit from smarter delivery with confidence in the integrity and protection of their data.

Data Insights

Status fields in a project will now have the Verto Intelligence icon, pressing this icon will instruct Verto Intelligence to analyse the information and give you it's considered opinion on what the status should be. Verto Intelligence will provide a narrative on the reasoning around the suggested status change, which users can then accept and add both the status and the narrative to the project instantly.

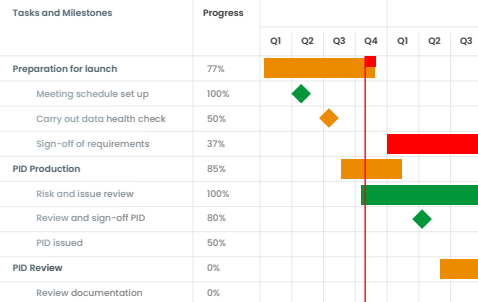

Verto Intelligence Assisted Imports

For many new clients, as we are onboarding them, they already have risk data in a variety of documents, formats and templates. This tool enables you to take differently formatted data and import it into Verto, mapping risk fields to excel columns, suggesting the dropdown values in a risk that align to the spreadsheet and performing 80% of the heavy lifting required when mapping disparate input sources.

Community Venues	Feb	✓	✓	✓	✓	✓	✓

Health Report

Verito Intelligence partners

We have developed AI agents, called VIPs, who have been designed to be experts in finance, risk, project admin and IT. VIPs give you access to a core team of agents who will advise you on the project, where it is, what needs to happen next, and helps you action various steps within the platform. Accessing this team of experts provides excellent training opportunities for new or 'accidental' project managers and helps reduce time spent on administrative tasks. The partner's advice also helps point you in the right direction for the next most important action to take.

"Our goal is to make AI useful, safe, and actionable for every public sector team, not just a future concept, but a working reality. I'm incredibly proud of the team behind Verto Intelligence. This milestone wouldn't be possible without their dedication and vision."

Ross Mardell,
Verto's Chief Product Officer

How to join Verto

Built around what you actually need

After almost 20 years working with the UK public sector, helping 100+ clients in some of the most progressive organisations, we know that no two PPM solutions looks the same.

There are several ways to purchase from Verto - including G-Cloud 14, TePAS 2 and Direct Award. We also work with several market-leading partners, which enable you to purchase through alternative frameworks.

Buying Process

Throughout the entire process, you have one person who will work with you, your Account Director. They will ensure you have everything you need to manage your procurement process, and ensure you get exactly what you need from us.

The process includes:

Discovery Call

We get to know your organisation, priorities and what you need from a PPM platform.

Scoping Session

A structured working session to map your requirements, scale and integration needs.

Digital Sales Room

A shared space for your team - demos, resources and answers all in one accessible place.

Written Proposal

A clear, tailored proposal with pricing, tier options and everything needed to make a decision.

Onboarding

Structured, hands-on onboarding so your team is up and running with confidence from day one.

Focus, collaborate, deliver with confidence
